

EUROX 유록스®

Trademark of Cleaner Environment
Cleaner AdBlue ***EUROX***

EUROX(Urea Solution) is a Catalytic reductant which is made of Urea and SPW(Super Pure Water). Entering of EURO6 stage, EUROX is used for purifying Nitrogen Oxides(NOx).

- By using EUROX at Diesel vehicles, it turns NOx among exhaust gas into Nitrogen and water, which is harmless for human body. So that it reduces greenhouse gas and makes atmospheric environment cleaner.
- According to ISO22241, EUROX is colorless, odorless, and freezing point is 12.2°F(−11°C).

AdBlue®

EUROX

a Fine Solution for Diesel

EUROX[®] is,

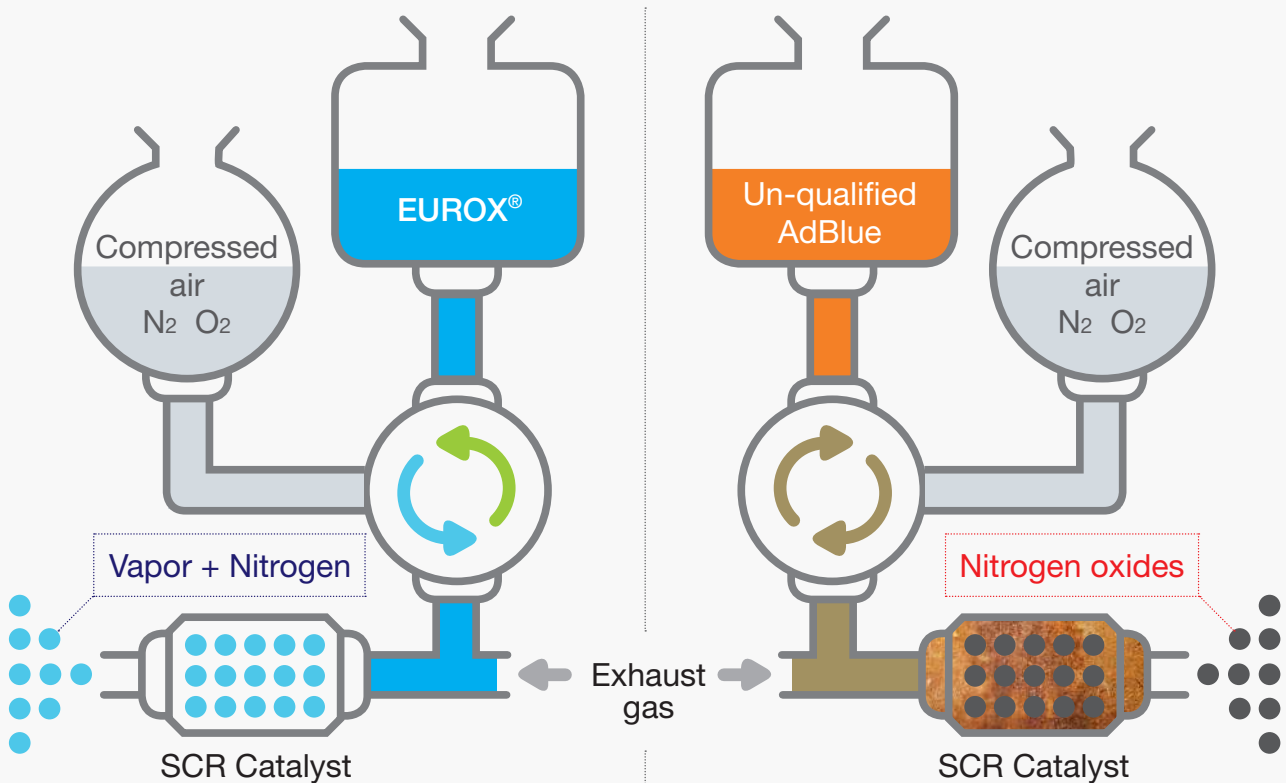

The most sales in South Korea over 10years.
High-quality raw material, strict quality
management and inspection made EUROX[®]
become a World-best catalytic reductant for
SCR system. (AdBlue[®] licensee, world-wide)

* SCR : Selective Catalytic Reduction

Quality Importance

AdBlue, which removes NOx among SCR system, is very important.

By using un-qualified AdBlue, it causes not only breakdown of vehicle but also expensive repairs.

EUROX®

By passing the catalyst, EUROX and compressed air makes NOx among exhaust gas into vapor and nitrogen.

Un-qualified AdBlue

Heavy metal ions and impurities contained in unqualified AdBlue turns into metallic salt which could contaminate catalyst by mixing with compressed air, and exhaust gas. It may shorten the life cycle of SCR system.

WHY EUROX®?

1 / High-quality Urea

EUROX® is made of high-quality raw material. By running isolated warehouse, contamination of raw material is fundamentally prevented.

2 / Pure Water

Pure water is highly necessary at manufacturing of EUROX®. Metal ions contained in the water could turn into metallic salt by combination with NOx. EUROX® is made of SPW (Super Pure Water) which is used for high-precision products.

3 / Quality Management

Quality management ability of EUROX® is industry's highest level by possessing ppb scale measuring equipment.
